

Environmental Policy

"K" Line Logistics, Ltd.

"K" Line Logistics, Ltd. aims to be a comprehensive logistics company that gives consideration to the environment under its corporate principle, which reads, "Beyond Logistics. Connecting People Around the World." Aware that conservation of the global environment is a material management issue, we have established our environmental policy as set out below with a view to realizing a sustainable society through the logistics business.

1. Strict compliance with laws and regulations and fulfillment of social responsibility

We will comply with environment-related laws and regulations to fulfill social responsibility and work to conserve the environment in collaboration with business partners and related parties.

2. Structure for implementation of environmental management

The management is aware that issues related to climate change are significant management issues and will assume responsibility for tackling such issues. It will develop environmental management and improve it continuously and efficiently upon decisions made by the Board of Directors. The Board of Directors will discuss and monitor material matters related to climate change.

3. Environmental strategies and contribution to a decarbonized society

We will view our environmental response as an opportunity and strive to build a new environmentally friendly business model that helps reduce environmental impact.

4. Optimization of the workplace environment for reducing environmental impact

We will accelerate operational streamlining, introducing energy-efficient equipment, waste reduction and recycling to make effective use of resources and achieve both the optimal workplace environment and sustainable work styles.

5. Promotion of sustainable logistics helpful to reduction of environmental impacts

We will endeavor to offer sustainable logistics services with low environmental impact by reducing greenhouse gases, making effective use of energy, introducing environmentally friendly vehicles, increasing load efficiency, and adopting environmentally friendly packing materials and taking other actions.

6. Sustainable procurement

We will implement responsible sourcing with environmental considerations in accordance with the "K" LINE Group Companies Sustainable Procurement Policy.

7. Prevention of environmental pollution

We will strive to prevent environmental pollution in the atmosphere, water, soil and others. In the event of handling hazardous chemical substances, we will unfailingly implement proper management.

8. Consideration to biodiversity preservation

We will recognize the impact of our business activities on biodiversity and endeavor to give consideration to preserving ecosystems.

9. Improvement in environmental awareness

We will provide ongoing education on the environment and raise environmental awareness to ensure that every employee has the mindset of giving consideration to the environment.

10. Disclosure of information concerning the environment

We will disclose climate-related information and endeavor to conduct initiatives in consideration of the environment in collaboration with various stakeholders.

11. Relationship with the industry association

We will take fair action in line with the objectives of the agreement concerning climate change reached at the industry association. We will support the activities of the industry association to mitigate climate change. In the event that differences in positions within the industry association emerge, we will make proposals as needed.
